

The Claims

This listing of claims is unchanged from the prior Response and is provided as a convenience for the Examiner.

Listing of Claims:

1. (previously presented) A method for transferring Web-based information over a network to a personal information management system having calendar and contact data for a set of users, the method comprising:

- permitting a user to select the Web-based information on a Web page viewable in a Web browser;

- permitting the user to use a toolbar associated with the Web browser, the toolbar having a plurality of indicators for identifying an information type such type being selectable from a group including address and event, associated with the Web-based information so that the user can make an identification of the information type;

- receiving the user's identification made via the toolbar of the type of information;

- creating a transfer request that includes at least the Web-based information and an address for a server associated with the personal information management system and in communication with the network, such request being created in response to such type identification;

- sending the transfer request to the server, the server having access to the calendar and contact data for the set of users; and

- storing the Web-based information at the server, the Web-based information associated with at least one user in the set of users, in accordance with the type identification.

2. (original) A method according to claim 1, wherein the transfer request is a hypertext transfer protocol request.

3. (previously presented) A method according to claim 1, wherein the Web-based information is stored in a database in communication with the server.
4. (original) A method according to claim 1, wherein the network is the Internet.
5. (previously presented) A method according to claim 1, wherein the Web-based information is contact information and the Web-based information is stored with the contact data for the at least one user.
6. (previously presented) A method according to claim 2, wherein the Web-based information is event information and the Web-based information is stored with the calendar data for the at least one user.
7. (cancelled)
8. (previously presented) The method according to claim 1, further including sending a response from the server to the Web browser to indicate that the Web-based information has been transferred to the personal information management system.
9. (previously presented) A method according to claim 1, wherein the Web-based information is selected by the user by highlighting information displayed by the Web browser.
10. (cancelled)
11. (previously presented) A system for transferring Web-based information over a network to a personal information management system having calendar and contact data for a set of users, the system comprising:

a first process running on a server responsive to user interaction;

a Web browser in communication with the first process over the network, wherein the Web browser permits a user to select the Web-based information on a Web page viewable in the web browser;

a toolbar associated with the a Web browser, the toolbar having a plurality of indicators for identifying an information type, such type being selectable from a group including address and event, associated with the Web-based information, the toolbar permitting the user to make an identification of the information type; such first process receiving the user's identification made with the toolbar of the type of information;

a second process in communication with the first process, for creating a transfer request that directs the Web-based information to the personal information management system based on the information type selected by the user;

a third process, in communication with the second process, for sending the transfer request to a server; and

at least one server, coupled to the network, to receive the transfer request and store the selected Web-based information, in a storage location associated with the user.

12. (original) A system according to claim 11, wherein the transfer request is a hypertext transfer protocol request.

13. (original) A system according to claim 11, wherein the Web-based information is stored in a database in communication with the at least one server.

14. (previously presented) A system according to claim 11, wherein the Web-based information is contact information and the set of Web-based information is stored with the contact data for the user.

15. (previously presented) A system according to claim 11, wherein the Web-based information is an event and the Web-based information is stored with the calendar data for the user.

16. (previously presented) A system according to claim 11, wherein the Web-based information is selected by highlighting information displayed by the browser.

17.-22. (canceled)

23. (previously presented) The A method of according to claim 8, further including presenting a confirming indicator on the toolbar, the confirming indicator confirming transfer of Web-based information to the personal information management system.

24.-32. (canceled)

33. (previously presented) A method according to claim 1, wherein user-interaction with one of the selected indicators also initiates transfer of the Web-based information.
